

Notification Wiring Validation Proof

Validated 22 September 2026 | Source and live-database validation

Validated: 2026-09-22. Scope: all current in-app notification dispatches in `src/`, the borrower-account/payment-proof implementation, and read-only checks against Supabase project `acopcwllhkovssjnrqygk`.

Evidence summary

Evidence	Result
Targeted workflow, borrower-link, payment-review, RLS-policy, and catalog tests	56 passed, 0 failed
Full Node suite	1,778 passed, 0 failed, 7 skipped
Lint	passed
Production build	passed
Live database	borrower-link RPC exists and is owned by postgres; payment update policy exists
Live notification rows	existing rows prove inserts for <code>application_account_connected</code> (2), <code>application_endorsed_to_cig</code> (1), <code>application_for_verification</code> (51), <code>application_for_approval</code> (46), <code>application_approved</code> (45), <code>computation_signed_by_borrower</code> (3), <code>lead_converted</code> (4), <code>dcr_rejected</code> (17), and <code>application_denied</code> (1)
Browser smoke suite	not green : 2 failed (stale/ambiguous assertions), 1 skipped (no seeded credentials)

The full authenticated notification journey was not executed against production: it requires designated staging test identities and would create real payment/application records and inbox rows. This report therefore separates source/contract proof from a live user-journey proof.

Visual proof

A live CIG inbox capture was taken during this validation and displayed in the associated Codex task. It shows the in-app notification bell with an unread New application endorsed for verification item, its relative timestamp, and the rendered catalog message. The image is intentionally not embedded in this repository report because it contains production borrower information; this report preserves the redacted, reproducible evidence instead.

Recipient rules

- Every notification is inserted through `src/lib/notifications/write.ts`. It honors `preferences.notifications.inApp === false`, catches failures, and returns without breaking the business operation.
- Borrower notifications resolve `loan_applications.borrower_id -> borrowers.user_id`; an unclaimed borrower is skipped with reason `borrower_unclaimed`.
- Role notifications resolve active users with the target role and exclude the acting user. They are shared-queue broadcasts, not per-application ownership assignment.
- Payment-proof owner is remedial when `assignments.remedial_user_id` exists; otherwise collector. No assignment means no staff notification.

Workflow catalog notifications

`<application>` below renders as application number and borrower name where available. Trigger locations are source paths, and all catalog entries are verified by `src/lib/notifications/__tests__/workflow-wiring.test.mts` to occur after their named state-changing marker.

Trigger / location	Recipient	Title	Body
Borrower submits application - <code>src/app/api/borrower/applications/[id]/submit/route.ts</code>	active CSA users, excluding borrower actor	Borrower submitted an application	<code><application></code> was submitted by the borrower and is ready for intake review.
Borrower signs computation - <code>src/app/api/borrower/applications/[id]/computation/route.ts</code>	active CSA users	Borrower approved the computation	<code><application></code> : the borrower signed the loan computation. The file can move forward.

Trigger / location	Recipient	Title	Body
Borrower replaces a revision-requested document - src/app/api/borrower/applications/[id]/documents/route.ts	active CSA users	Borrower uploaded a document	<application>: a new document is ready for review. Replacement for: <file>.
Staff requests document revision - src/app/api/documents/[id]/request-revision/route.ts	linked borrower	A document needs revision	A document on your application needs to be replaced. Please upload a new copy. Reason: <remarks>.
CSA endorses - src/app/api/csa/applications/[id]/endorse/route.ts	active CIG users	New application endorsed for verification	<application> was endorsed by CSA and is waiting in the CIG verification queue.
CIG returns file - src/lib/cig/receipt.ts	endorser; otherwise active CSA users	Application returned to CSA	<application> was returned by CIG for correction. Note: <note>.
CIG cancels - src/lib/cig/cancel.ts	endorser; otherwise active CSA users	Application cancelled by CIG	<application> was cancelled during verification. Reason: <reason>.
CIG cancels - src/lib/cig/cancel.ts	linked borrower	Application cancelled	Your loan application was cancelled. Please contact Loan Star for guidance.
CIG forwards - src/lib/cig/forward.ts	active committee users	Application ready for committee review	<application> was verified by CIG and is waiting for the committee.
Revision completed - src/lib/negotiation/service.ts	active committee users	Revision complete - back for approval	<application> was revised and is back with the committee.
Committee approves - src/lib/committee/actions.ts	active CSA users	Approved - disclose terms to the borrower	<application> was approved by the committee. Disclose the approved terms to the borrower.
Committee denies - src/lib/committee/actions.ts	active CIG users	Denial call needed	<application> was denied by the committee. Call the borrower to inform them.
Committee revisits CSA - src/lib/committee/actions.ts	active CSA users	Committee sent a file back to CSA	<application> needs revision before it returns to the committee. <detail>
Committee revisits CIG - src/lib/committee/actions.ts	active CIG users	Committee sent a file back to CIG	<application> needs re-verification before it returns to the committee. <detail>
CSA discloses terms - src/lib/negotiation/service.ts	linked borrower	Approved terms ready for your review	The approved loan terms are ready. Please review and sign in your portal.
Borrower counter-offers - src/lib/negotiation/service.ts	active committee users	Counter-offer received	<application>: a counter-offer needs the committee's response. Proposed amount: PHP <amount>.
Committee revises amount - src/lib/negotiation/service.ts	linked borrower	Loan amount updated	The committee updated your loan amount. Please review and sign the new terms.
Committee accepts counter-offer - src/lib/negotiation/service.ts	linked borrower	Counter-offer accepted	The committee accepted your counter-offer. Your application is moving to release.
Borrower negotiation message - src/lib/negotiation/service.ts	active committee users	New message from the borrower	<application>: the borrower posted a negotiation message.
Committee negotiation message - src/lib/negotiation/service.ts	linked borrower	New message about your loan terms	The committee posted a message on your application.
Signed file queues for LRA - src/lib/negotiation/service.ts	active LRA users	New file ready for release	<application> was signed and is queued for release processing.
Release files signed - src/lib/lra/release-service.ts	active collection-head users	Release briefing needed	<application>: all release documents are signed. The borrower briefing is next.
Briefing acknowledged - src/lib/lra/release-service.ts	active LRA users	Briefing done - ready for release	<application>: the briefing was acknowledged. The file is ready for disbursement.
Loan released - src/lib/lra/release-service.ts	linked borrower	Your loan was released	Your loan proceeds have been released. Thank you for choosing Loan Star.
AR masterlist created - src/lib/ar/masterlist.ts	active AR users	New account needs a collector	<application> was released and transmitted. The account is active - assign a collector.
AR masterlist created - src/lib/ar/masterlist.ts	linked borrower	Your loan account is active	Your loan account is now active. You can view your schedule and payments in the portal.

Trigger / location	Recipient	Title	Body
AR marks paid off - src/lib/ar/masterlist.ts	linked borrower	Loan fully paid	Your loan is fully paid. Thank you!

Direct notifications outside the catalog

Trigger / location	Recipient	Title	Body
CSA connects a walk-in application - src/app/api/csa/applications/[id]/connect-borrower/route.ts	target borrower's linked user	Loan application linked to your account	A Loan Star application has been linked to your borrower account. You can now review it in your portal.
CSA endorses - src/app/api/csa/applications/[id]/endorse/route.ts	linked borrower	Application sent for verification	Your loan application was endorsed to CIG for credit verification.
CIG forwards - src/lib/cig/forward.ts	linked borrower	Application under committee review	Verification is complete. Your file is now with the Approving Committee.
Committee approves - src/lib/committee/actions.ts	linked borrower	Application approved	The committee approved your loan application. Next steps will follow for disclosure and release.
Committee denies - src/lib/committee/actions.ts	linked borrower	Application decision	A decision was recorded on your loan application. Please check your email for the written notice.
Borrower uploads proof - src/app/api/borrower/applications/[id]/loan/route.ts	remedial owner, else collector	Payment proof awaiting verification	A borrower submitted a payment proof that requires review.
Current owner confirms proof - src/app/api/collector/payments/[id]/route.ts	linked borrower	Payment proof confirmed	Your submitted payment proof was confirmed and is awaiting posting to your loan account.
Current owner rejects proof - src/app/api/collector/payments/[id]/route.ts	linked borrower	Payment proof needs attention	Your submitted payment proof could not be verified. Please contact Loan Star for guidance.
CSA converts lead - src/app/api/csa/leads/[id]/convert/route.ts	originating agent	Lead converted to application	Your lead for <borrower> was converted to an application.
AR assigns collector - src/lib/ar/masterlist.ts	newly assigned collector	New account assigned to you	<loan account> was assigned to you for collection.
AR turns account over - src/lib/ar/masterlist.ts	remedial officer	Account turned over to you	<loan account> was turned over to you for remedial handling.
AR turns account over - src/lib/ar/masterlist.ts	former collector	Account turned over to remedial	<loan account> was turned over to a remedial officer and is no longer on your desk.
Collector submits DCRR - src/app/api/collector/dcr/route.ts	active AR users	DCRR submitted for reconciliation	A collection report was submitted and is waiting for AR reconciliation.
AR reconciles DCRR - src/app/api/ar/dcr/[id]/reconcile/route.ts	DCRR owner	DCRR reconciled	AR reconciled and posted your DCRR.
AR reconciles DCRR item - src/app/api/ar/dcr/items/[itemId]/reconcile/route.ts	DCRR owner	DCRR item reconciled	AR reconciled and posted an item on your DCRR.
AR rejects DCRR/item - src/app/api/ar/dcr/[id]/reject/route.ts, src/app/api/ar/dcr/items/[itemId]/reject/route.ts	collector and linked borrower	DCRR rejected / Payment needs re-verification	Collector: AR rejected your DCRR: <reason> (or one payment). Borrower: Your recent payment report was returned for correction. Your account balance will update once it's re-processed - no action needed from you.

Payment-proof authorization finding - not production-ready

The API and download routes select the correct current owner. However, the live `payments_collector_update` RLS policy still permits **any** `collection:edit` user to update any payment other than `confirmed` or `posted`, without an assignment existence check. A user can bypass the application route with direct PostgREST access.

Until that policy makes the collector branch assignment-scoped `*and*` requires `remedial_user_id IS NULL`, the rule "remedial if set, otherwise collector" is not enforced at the database boundary.

Required final live proof

Use dedicated staging accounts - not production users - to run these cases and query the resulting notifications rows by generated entity ID:

1. Link a walk-in application to a portal borrower: one borrower notification; all related borrower IDs update together.
2. Upload proof with collector only: collector receives one notification.
3. Turn over to remedial then upload proof: remedial receives one; former collector receives none.
4. Review as former collector: route and direct database update both fail; status remains `pending_verification`.
5. Review as remedial: status changes once and linked borrower gets one outcome notification.
6. Repeat with `inApp: false` and with an unclaimed borrower: business action succeeds and no inbox row is created.
